

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

#### Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + Make non-commercial use of the files We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + Refrain from automated querying Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + Maintain attribution The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + Keep it legal Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

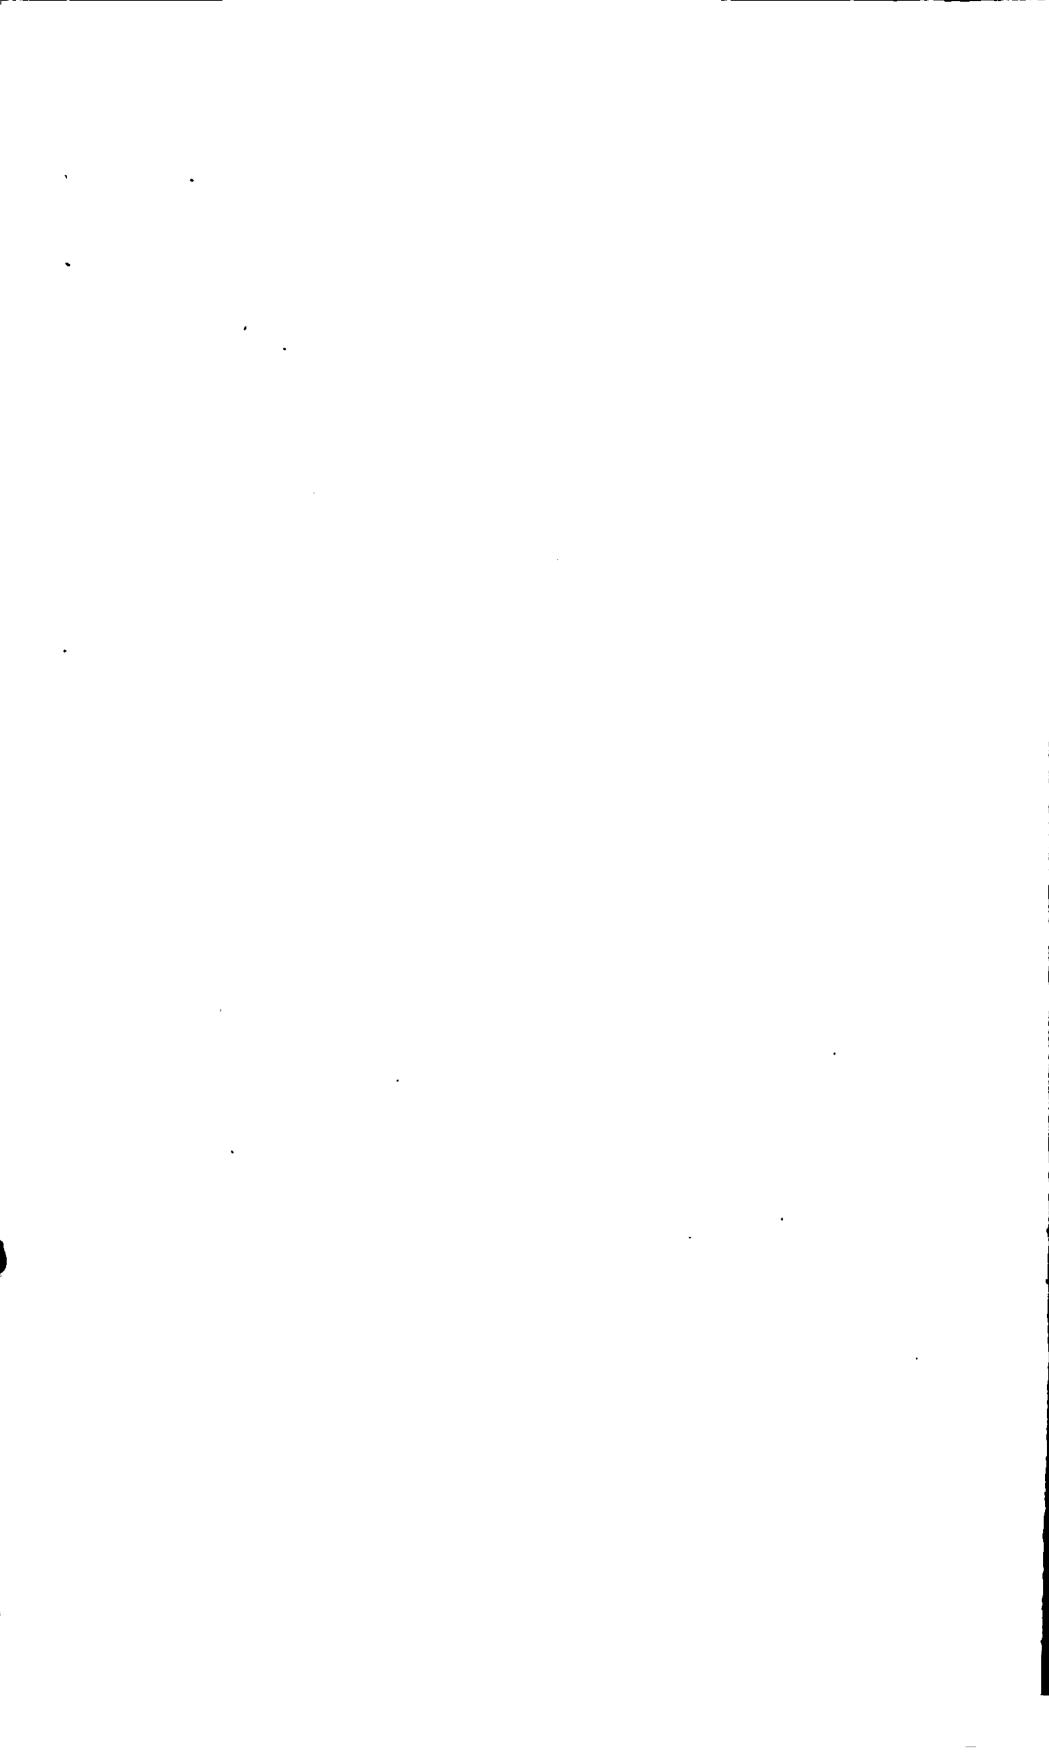

#### About Google Book Search

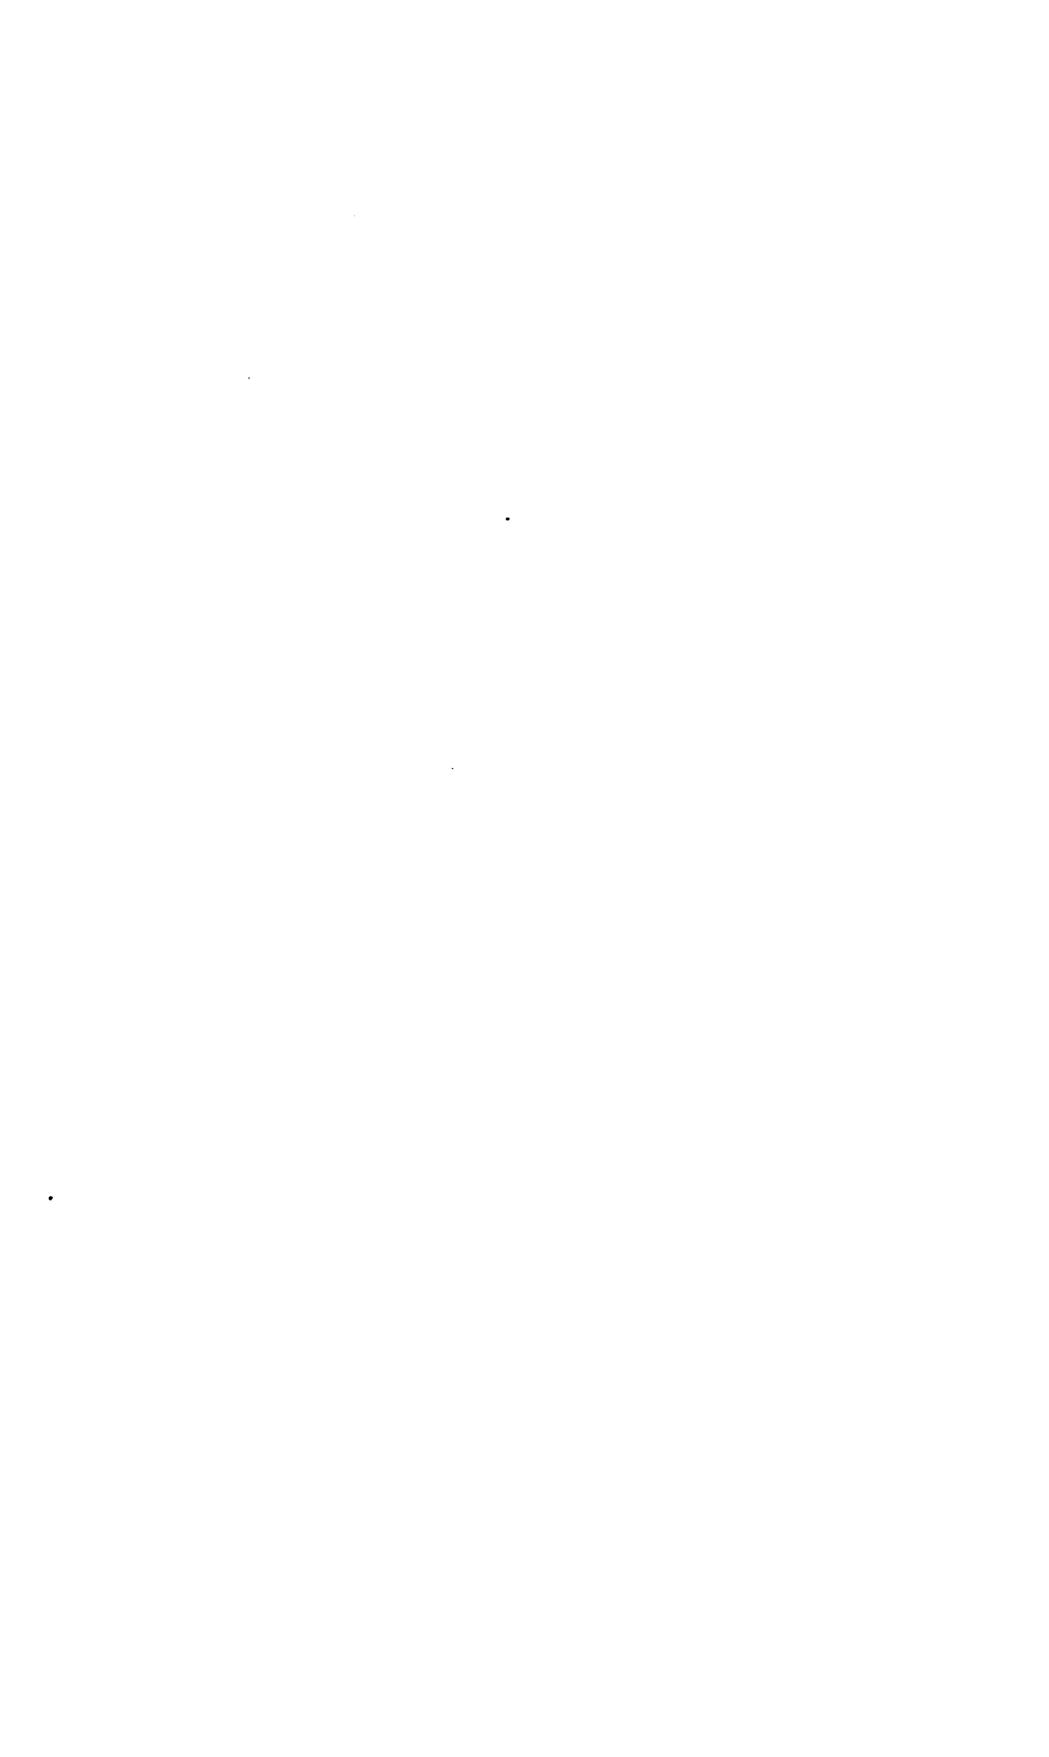

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. London, s. [the Metropolis of Great Britain, the boast of the British dominions, the favourite mart of Europe, and the rendezvous of the mercantile world: sufficiently aucient to excite the curiosity, and engage the attention of the Antiquary; being a place of great opulence, famous for the resort of merchants from all parts in Nero's time, as appears from Tacitus's Annals, and, if the British History deserve any credit, long before.] Llundain, Caer Llundain.—N. B. London has long exercised the skill of the antiquarian Critics to find its etymology; and it must hurt the competent judge in these studies, to observe how many a learned person has been racking his invention, and lavishing talents, to find out the etymon and derivation of the word; while, through want of proper advertence to the British original, or want of acquaintance with the genius of the ancient British language, ingenuity serves only for the foundation of air-built castles or legendary fictions. Among the multiplicity of derivations that have been given, the most plausible seem to be these; viz. Llong-ddin (according to Camden) i. e. The city of ships; from Llong---a ship, and Din---a city; implying it to be---a maritime and commercial city.—Llwyn-ddin (according to Dr. Gale) i. e. A city in a

grove; from Llwyn---a grove, and Din---a city; implying it to have been originally surrounded with woods, as the cities or towns of the Ancient Britons generally were, and as history informs us London in particular was even in later times.—Llan Ddian (according to Seiden,) i. e. The temple of Diana; from Lian) metonymically used for) --- a temple; and Dian---the goddess Diana, the tutelary deity of the place; for that Diana had a temple, and was peculiarly worshipped here, is point wherein the Antiquaries of our days seem to be universally agreed; and the cogent arguments that have produced this concurrence in opinion, may be seen in Gibson's 2nd edition of Camden's Britannia, in Gale's edition of Antonine's Itinerary, &c.---Llauonddyn (according to Somner, ) i. e. full of men; from Llawn---full, and Dyna man; implying that the place, when it received the name. was well peopled. These etymologies appeared so unsatisfactory to the no less ingenious than industrious author of the New History of London, that he adopted none of them; and despairing of any better success in the investigation, he dismissed the subject with this remark---that " original appellations are seldom transmitted down from rude ages, without being so much corrupted, as to render their etymology very uncertain, if not totally inexplicable."—Having thus (I hope, candidly represented the opinions and conjectures of others, I beg leave to submit to the consideration of such as are properly qualified to judge in these matters, what I have long conceived to be the true derivation of the term London, as being deduced without any violence or distortion from the original, and still unaltered, word in British; i. e. Llundain, or Caer Llundain (according to the historian Neurius in his Catalogue of ancient British cities,) which is, being transtated, The city of [under the influence and tutelage of, or devoted to] Diena.—In order to explain this, I must observe, that *Llune*d was one of the names of Diana among the ancient Britons, the root of which is Lien (in Latin Luna) the moon, still in use among us, as may be observed in *Dydd Ill*an(Monday;) and it is well known that Lung and Diang were one and the same Divinity, according to the Mythology of the ancient Heathens. And what proves (to me, at least,) that Lizzed was the Diana of the ancient Britons, is that our Bards both ancient and modern, when they would extol a woman for her chastity, style their heroine—Ail [a second] Luned. Of the numberless instances that might be produced to this purpose, take the following specimen, extracted out of an Elegy written several centuries since, upon the death of a lady of celebrated virtue:

" Och o'r golled am all Luned em oleuni."

Rendered in English, somewhat paraphrastically:

Our second Dian's orb is set, Alas! to shine no more.

I shall, in the next place, make a few remarks upon the adjective termination—ain, in order to shew its force and importance in

the Derivative under consideration.—The copiousness of the ancient British is such, that its Adjectives have a variety of endings expressive of the same quality; while, on the other hand, the same ending sometimes expresses various qualities, and abounds in significations. Thus the adjective terminations -ain, in, yn, og, wg, awg, awr, &c. denote the abundance, fulness, possession, or property, of that [whether it be a person or thing) expressed by the Substantive, to which any of the said terminations (but especially, ain, og, or wg) are annexed. For instance: Prydain, i. e. Britain, signifies Beautiful, or The Beautiful (in Latin—Formosa,) being derived from Pryd—Beauty; where we are to observe that *Prydain*, being of itself an Adjective, is only used substantively, by the figure Ellipsis, for Ynys Brydain, i. e. The Beautiful [British] Island. After the same manner, and by the rules above, Linnedgia, by contraction Liun'dain (Caer being omitted, but still understood) will signify—The city of Diena, or rather—The City full of [replete with] Diana, which latter expression, however uncouth it may be deemed as to sound. must be acknowledged to be very significant, when we reflect that the tutelar Divinity of a place was considered as pervading the whole, and present to every part thereof, for its superintendence, tutelage, and protection. Jovis omnia plena [all things are full of Jove,] says Virgil, Eclog. iii. 60.—representing thereby the supreme Divinity, and tutelary Deity of the universe, as filling or pervading every thing therein. ——— That the adjective termination—sin—is of a parallel signification with the termination—og or awg, will appear probable (to say the least) from Dr. Devies's making trummain synonymous with truming or trumming (jugoeus) in his Dictionary. There were two districts or commots, in the province of Powys, called Mechain (i. e. Mechain Iscoed, and Mechain Uwchcoed,) which were situate in the Marches, and, consequently, abounded in Fortresses; for Mechain is evidently derived from Mâch—security, figuratively a sort or fortress; so that the natural, and unstrained, meaning of the word is-Full of [abounding with] fortresses: if not, what doth it mean? -Machain (vulgo Machen) in Monmouthshire is radically, the same, but varied, a little by dialect.—The imports of the termination og or wg (equivalent to the termination am) in the names of places and territories, may be seen under Brecknock, Glamorgenshire, and Herefordshire,-As to the contraction of Llunedain into Llun'dain, there a:e not a few similar contractions in the British language; such as that of Dyreain into Dyr'ain, of Dyreuwr into Dyr'awr, of Gochely into Gock'lyd, of Myned into Myn'd, of Cymmeryd into Cymm'ryd, &c .- and, possibly, the Italian Lunedi (Monday,) contracted into the French Lundi, will not be thought improperly exhibited on this occasion.

Bright-water; from Llyck, lluck, or llug (bright, fair, clear, &c.) and Wr, ur, or eur (the ancient Celtic word for water;) this river being remarkably clear and pellucid. -That *Lluck* signifies—bright, &c. may be inferred from Linched (tiashes of lightning,) the singular of which is Lluckeden or *llycheden*: and that Wr (whence the compound Dy wr, by contraction d'or or dor) in the ancient Celtic signified—water—may be presumed, at least, from, 'Ogwr or Eog-wr (i. e. Salmon-water) a river in Glamorganshire abounding with Salmon, now corruptly called Ogmore. That Llug (the radix of the Latin Lux, i. e. light) bears the signification assigned it above will notappear improbable. if it be considered that Lug is still the name of a river in Herefordshire, remarkable for its pellucidity. And perhaps, it may in some degree corroborate what hath been said above of the meaning of Wr, ur, or eur to observe that Ura in the Cantabrian language (a dialect of the Celtic) still signifies—water. Of, prep. coming between Substantives, and denoting possessions, relation to, &c. being the sign of the genitive case with respect to the Latin language, has generally nothing in Welsh for it, the latter Substantive immediately following the former, as will be evident from the following examples; viz. The work of God, [God's work] Gwaith Duw. The house of God, Tŷ Daw; tŷ Dduw. The house of Da-Tý Dafydd (Ddafydd;) tŷ Dewi (Ddewi.). The house of the father of David or of David's father [David's father's house] Tý tha Dafydd. The husband of this women, [this woman's husband] Gwr prïod y wraig hon. The men of England, Gwyr Lloegt. The women of Wales, Gwragedd Cymra. A man of God, Gwr Duw, I gwr i Dduw, The fear of God, Ofn Duw. The fear of the distemper had seized him, Ofn yr (¶ rhag yr) haint a syrthiasai arno. A d man of Esgland, &c. Gŵr o Loegr, &c.—un o wyr Lloegr. A woman of England, &c. Gwraig o Loegr, &c.—un o wragedd Lloegr.

A horse of war, [a war-horse] Cad-farch,

rhyfel-farch, march rhyfel.

Of, coming before the matter or materials whereof any thing is made, is rendered in Welsh either by immediately subjoining the substantive of the matter to the preceding, or else by the intersertion of the particle—o, as in the examples following; viz. A house of wood [a wooden house] Ty coed, ty o good, I ty coedawl. Gates of brass [brazen gates] Pyrth près (o brès.) A candle of wax [a wax-candle] Canwyllgwyr (o gwyr.) A flame of fire, Fflam dan (o dan.) A throne of gold [a golden throne] Gorsedd aur (o aur,) I gorsedd euraid. A wall of stone [a stonewall] Gwâl faen (o faen,) I gwâl feinis.

Of, after partitives (i. e. Adjectives implying a part and not the whole,) comparatives, and superlatives, is rendered in Welsh by—e, as will be seen in these examples; viz. One of them must have done it, Rhaid mai un o honynt hwy a'i gwnaeth. There are not a few of them here, Y mae yma lawer (nid ychydig) o honynt. Many of these trees have I planted with my own hand, Llawer o'r prennau hyna blennais i â'm llaw fy hun, The elder of you, Yr hynaf o honoch. The wisest of men, Y doethaf o ddynion.

Of, when a Pronoun demonstrative goes before it, and a possessive follows, is completely rendered in Welsh in the translation of such possessive, as these instances will evince; vis. This book of mine, of his, &c. Fy llyfr (dy lyfr, ei lyfr, &c.) hwn. These sayings of mine, Fy ngeirian hyn, Mat. vii. 24. See Mine.

Of, preceded by a Substantive without a pronoun joined to it, and followed by a possersive, may be considered as changed into—to, and placed before the primitive of the said

possessice, which primities pronoun, with the particle to prefixed, being literally translet-

ed into Weish, will convey the spirit of the eriginal expression; as any one that is conversant in the Language will find by the examples following: viz. A friend of mine [to me] in his journey is come to me, Cyfaill i mi a ddaeth attaf wrth ymdaith, Luc xi. 6. A son of mine is come home, Mab i mi (¶ un o'm meibion) a ddaeth adref.

Of, or by, [after a Verb passive, &c.] Gan. He is preised of these, Efe a glodforir (clodforir ef) gan y rhai'n. Do that which is good, and thou shalt have praise of the same, Gwna'r hyn sydd dda, a thi a gai glod ganddo, Rhuf

Uxford, s. [the city so called, the capital of the county of the same name, pleasantly situated on the banks of the Isia, in fame outvying the once celebrated Ilissus of Attica, on whose sacred marge the Muses whilomploved to dwell, but which they have long since deserted for the more favoured one of Isis] Caer Fembyr, Caer Wrthëyrn, Caer Wysog (corruptedly Wosso, Wusa, Bossa, &c.) Khyd Wysg, vulgo Rhyd-ychen.—N. B. The first of the names above, signifies The fortress of Membyr, a very ancient British king of that name, who is said to have been the Founder of it. The second signifies The fortress of Vorligera a king of that name, who rebuilt this place, and who first invited the Saxons 📝 into Britain. The third signifies The fortress. of Usk or Wys (the British name of the river,) q. d. Isidis Castrum. The fourth signifies Usk-ford or Ous-ford (Isidis Vadum.) The **fith** is a literal translation of Oxford, or rather Oxen-ford, and is of no ancient date. — It may be here observed, that Ox-, in Oxford, has no reference to the animal so called, but arises from the oscitaucy of the early Saxons in this Island (among whom) there were but few scholars he fore the time of Venerable *Bede*,) and their imperfect apprehension of the sound, and (of consequence) inaccurate writing, of the British word Wysg, the appellation of several rivers in Britain. Camden. indeed, seems to be of opinion that Oxford means, A ford of [for] oxen, producing the Ochenfurt of the Germans, and the Bosporos of the Grecians, as a sort of presumptive and analogous proof of this: but such, as are critically conversant in etymological studies of this nature, know what deference is due to the concurrent decision of those learned Antiquaries, Llwyd and *Leland*, who are on the opposite side. See Oxford in Camden's Britannia; and Llwyd's Archæologia Britannica, page 7. col. 4.—That this place was the seat of Science, and devoted to the Muses, even in the druidical times, appears from our ancient Chronicles: and though they repeatedly retired from this their favourite Recess, disturbed by the horrid din of arms; yet as soon as ever Peace returned, with it too returned the gentle Sisters to these delightful Shades, their ever-loved Adode.—This Place was much harrassed by the invading Saxons, 'till they embraced the Christian Keligion in the the close of the 6th Century : and was afterwards infested by the Danish incursions, which were repelled by the renowned K. , Alfred, who, in the 9th Century, laid the foundation of the University in its present form. York, a [the capital of the county of the suma name, and in point of alignity the should cay in England; very respectable for its antiquity, formers have been, and are every day, discepanul ordinat truncs of the Ritutes having been stationed here, who interiord its original British name into Maror-am, which the Suscess in their turn modeled into Maronic, whence by accomption and contraction the propert appointion, York] Coor Rivery, —41. B. Many who soom to be over-food of the stude of Schulous Coops and the rust of nationity, attails to the name and foundation antiquity, attribute the name and foundation of the place to an ancient prince of the name of E/rang Godorn-Exrog the Mighty.—But should I show some incitation and backwordall Afrance Galara—Extrog the Stighty.—But should I show some inelaction and back wordman in admitting this their smortion without proof and anomalised, I hope it will be received as a sufficient apology, that I can produce the venues to manual Gale, Baxter, and others, to construence me in this my skapticism. The learned Dr. Gale, in his Commontries upon Antesiar's Sticerary, deciares, "that the Latin name is formed from a British ward; and that however it may have been variously spelled (viz. Wrush, "Urush, Birmash, Rifteech,) the meaning of the word is—Upon Ura, the river, which though it he at York now called—the Gase, was formerly called the Ure throughout its whole course."—I find in myself no small substitutes to controvert my thing advanced by as housed and impedience a parson as Dr. Gale; yet in this case, I must, from a regard to truth, summen up a little resolution, and say that a more intimate acquaintance with the genies of the Ancient British Innwith the genies of the Aucient British inn-gange, even were it joined with much inferior learning, would have directed his aim nearer the mark, and guided his stope with greater certainty, in the investigations.—The equality bearned, critical, and myscione Baxter, coming after the other, and entering into his harrout, gathered more plentifully, and was, at feast in this point, more successful. Hear the enhetance, if not the identity, of what he has so ingeniously said on the subject in his Gless. Antiq. Britain.—From the British Eur or Sir, asswering to the Greek Curum (whemse by prefixing the Prapasitive, as is usual with as in these cases, are formed Dormand Charalle and Charalle and the Adiaption frances. usual with an in these cases, are formed Dur-and Bour,) is predented the Adjective aurenc, i. e. Absurding with [that has pienty of] water; and hence the British name of the piene.—Corr Evreue, i. e. The Fortrass or elty absunding [well supplied] with water.— The translation have given, as also that of the passing out of Dr. Gale above, will, I hape, he found sufficiently exact to convey the manning of the original; which is all that is here pretended to.—With all due deference to the critical abilities of the great manne above westlessed, I shall here by held of the apportunity to exhibit an additional east of my researches into Ancient-British of the appartunity to exhibit an additional east of my researches into Auciout-British Etymology, and begin with premising a few observations, which though they may perhaps offer nothing absolutely new, or that may deserve the name of a discovery, may not be norful to explain or examplify what, in their principles, may have been not an-known before.——Wr, w, sw, or cfr, in the nacional Celtic, significatives. ### DISSERTATION

ON THB

## WELSH LANGUAGE, &c.

"NESCIRE quid antequam natus sis acciderit, id est, semper esse puerum," says Cicero; and it is a saying that, if duly attended to, and suffered
to have its natural influence upon the mind, will awaken a man's curiosity,
and spur him on in his researches into antiquity, while either history leads
the way, or probable conjecture lends its friendly clew.

And since we find that the way to things is generally by words, our first object in the pursuit ought to be the acquisition of language, which to Britons'especially must be the ancient British or Welsh, as being not only the original language of this island, but also the oldest, or, at least, one of the oldest living languages in the world. But lest what I have thus cursorily advanced should be contested by any one, or be looked upon as a groundless assertion, I shall proceed by regular steps to investigate the antiquity of the Cambro British or Welsh language, and not absurdly expect that an ipse dixit should any where pass for a proof or demonstration. And the first step in this investigation shall be a critical enquiry into the etymology of the term, name or appellation, whereby this language is expressed or denoted, first, by its original proprietors the Cambro-Britons; and, secondly, by the English at this day, as transmitted to them from their Saxon ancestors.

The ancient Britons, viz. the natives of Wales, call their language Cymraeg, i. e. the language of the Cymry. Now Cymry, or (as it ought to be written, according to the most approved Orthography) Cymmry is the plural of Cymmro, a word compounded of the Cambro-British Cyn (signifying, first, primitive, original, &c.) and Bro (i. e. a region or country.) And lest any one should think this a forced derivation, on account of the change of the letters n-b into m-m, let it be observed, that, according to the genius of this language, Cyn, in composition, changes its n into the liquid of the word following; thus, Cymmru (the original matrix or producer, i.e. native country) from Cyn and Bru; Cymmrodorion (the Aborigines or first inhabitants of a country) from Cyn and Brodorion, sing. Brodor, &c.

Yet it must not be dissembled, that Cymmru might with (at least) equal propriety be written Cyn-fru; and Cymmrodorion, Cyn-frodorion (the f in both being sounded like the v, English;) and probably the ancient pronunciation corresponded with this last mode of spelling: but what gave rise to the orthography, that prevails at present, might be this; namely, that our ancestors the Cambro-Britons made use of m and b promiscuously to express the modern sound of f Welsh, or v English, as hath been incontestably shewn by the learned and ingenious Mr. Edward Llwyd in his Archeologia Britannica, p. 226, and 228; so that those letters had then two sounds each allotted them, viz. their present universal sound, and that particular one above-mentioned. Thus, Cym-mru, it is very probable, was originally written Cyn-mru or Cyn-bru, though pronounced as if written, according to the present mode of spelling, Cyn-fru; but when, by the improvement of orthography, m and b came to be used only to express their modern, universal, and unvaried separate sounds, the n in Cyn was changed, Euphoniæ gratia, into m, and Cym-mru or Cyn-bru came to be spelt, as at present, Cym-mru (Cym'ry) or Cymbru, the traces of which last mode is not obscurely discovered in Cumbria (the Latin name of Wales;) in Cumbria (the Latin name of Cumberland,) where a branch of the Ancient Britons maintained their ground, and were governed by princes of their own till the 8th century; in Cimbri, the ancient inhabitants of Jutland and Holstein; in Cantabria (Cynta-bru,) the country of the Cantabri, an ancient people of Spain, bordering on the Bay of Bisday, &c.

Cym-mry then (or, as it is written at present, Cym'ry) can signify nothing else, at least in my opinion, but the Aborigines or Indigence (first inhabitants or natives) of a country; which meaning of the word seems to be implied, and alluded to, in Casar's Description of Britain, when he says ["Britannia pars interior ab its involitur, quas nature in insula ipsa, meaning proditum dicunt"] "The inner part of Britain is inhabited by such as are recorded by tradition to be originally produced in the island."

If the above-given (which, I think, will admit of no dispute) be admitted as the true meaning of the word Cym'ry, the inference will be natural; namely, that Cymra-eg (the ancient British) is the aboriginal language of this island of Great Britain.

I now proceed to trace out the etymology, and enquire into the signification of the word Welsh, the term whereby the English of our days, as also their Saxon ancestors did before them, express the Cambro-British language.

Welsh is derived from Wales, and this again (if we believe an old story quoted by Sir Henry Spelman) from Guala, daughter to Cadwaladr the last king of the Britains, and wife to Ina king of the Saxons, who began his reign, A. D. 689. No, says Dr. Brady, (who quotes this story in eader to

confute it.) "Wales never had its name from her, but from the Saxon, Wealk, which signifies a Stranger; and both the Britains and their language being strange to the Saxons, they called them Wealks, or Strangers; &c.

The Doctor, it must be owned, hath sufficiently disauthorized the story of Guala, and, consequently, destroyed the foundation of the etymology of Wales founded therenpon; nor, indeed, did it require any uncommon abilities to discover the falsehood, and expose the futility of a legend, that had in it so many evident marks of fiction. But let us examine whether he hath been equally successful in establishing what he hath thought proper to substitute in its stead. Is it at all probable that the Saxons should be so little acquainted with,—should have so forgotten the Britons, by whom they had at first been called in as auxiliaries, and with whom they had afterwards had daily struggles for victory and empire for centuries together;—is it all probable, I say, that the Saxons should have so forgotten them after all this, as to call them Strangers in their own country? as to call them aliens, as it were, in their own own houses?—it cannot be. It is true, Dr. Brady is not singular in his derivation of Wales; for the learned Wotton hath, in effect, advanced the same doctrine. His words are these,—"Populus hic, cujus leges exhibemus, seipses Wallos nunquam appellabant. Cambros (Cymry) se ab omni memoria vocabant et etiamnum vocant. Lingua sua Cymraeg (Cambrica) ab incolis appellatur. Nos Seison (Saxones) vocant, et Linguam Anglicanam Seisneg (Saxonicam.) Angli illos Wylisce (Wallos) i. e. Peregrinos vocabant ab Inæ regis temporibus ad nostra usque sæcula; seque ipsos indigenas regionis sure fuisse existimabant, postquam Britannos veteres in regionem, que a mobis Wallia vocator, detrusissent." In English thus—" This people, whose laws we offer to public view, never called themselves Welsh; they always did, and still do, call themselves Cymry. Their language, the inhabitants style Cymraeg. They call us Seison (Saxons,) and the English tongue Seisneg (the Saxon.) The English ever since the time of king Ina, have called them Wylisce (Welsh) i. e. Strangers; and reckened themselves the natives of their country, after they drove the Ancient Britons into the country, which is by us called Wales."

Yet neither of these learned men were the original Authors of this etymological stroke of criticism, for we find Sir Ed. Coke, in his Comment upon Littleton, displaying his skill in etymology as follows;—"Wallia cometh of the Saxon word Wealh, which signifieth Peregrinus or Exterus, for the Saxons so called them; because, in troth, they were Strangers to them; being the remains of the old and ancient Britains, a wise and warlike nation, &c."

When an author of note happens to advance any thing plausible and specious upon an intricate subject, we may often observe the same supinely co-

pied even by the learned and ingenious; and thus suffered to pass unexamined, without either doubt or contradiction for years, nay sometimes for ages; till some hardy critic arises, who, disdaining servilely to tread in the steps of others, and to be led blind-fold in the trammels of authority, examines with his own eyes every step he takes, and at last discovers, and daringly strikes out into a new and better path; then every body is amazed at its not having been discovered sooner. And with this and no other remark I was once more than half-resolved to dimiss the great names quoted above. But it occurring to me at the very instant that the celebrated Taliesin hath Wallia in a Poem of a prophetic cast, written about 150 years before the beginning of the reign of king Ina, I could not prevail with myself not to insert the passage:

Eu Ner a folant, Eu hizith a gadwant, Eu tir a gollant,

Ond gwyllt Wallia.

Thus translated into Latin by Dr. Davies.

Usque laudabunt Dominum creantem, Usque servabunt idioma linguæ, Arvaque amittent sua cuncta, præter,

Wallica rura.

And thus paraphrastically attempted in English by J. W.

Still shall they chant their great Creator's praise; Still, still retain their language and their lays; But nought preserve of all their wide domains, Save Wallia's wild uncultivated plains.

Hence, I presume, it is evident that Wales (in Latin, Wallia) was not so named from Guala; for it is not pretended that she was born till many years after this Poem was written. Nor is it less clear that it is not derived from Wealh (a Stranger,) for, not to insist upon what Verstegan says, namely, that Fremetling in the old Saxon tongue is the only word for Stranger; not to insist upon this, I say, it is entirely incredible that the Saxons should become so totally unacquainted with the Britons in the space of 90 years, as to have no other name but Strangers to express them by, though they had fought under their banners, and received pay from them for the first ten of the ninety; and, after they had projected the design of becoming their masters, had been obliged to measure swords with them every day.

Having advanced thus far in sapping the foundation of the air-built opinions of others, I shall now proceed to establish my own; nor is it, I confess, altogether my own, for Verstegan and Rapin have espoused the same in substance before: and it is this—that Wallia is derived from Gallia, and the English Wales from the French Galles or Gauls (a people or nation

of the ancient Celtæ called by the Romans Galli;) that the Saxons gave the Britons the name of Wallish or Wallis (by contraction Walsh or Welsh,) i. e. Gauls, judging them to be of Gaulish extraction; that Wallish is the Saxon or German mode of writing and pronouncing Gaulish or Gallish (in French Gaulois) by changing the G and Gu of the French (and Latin) into W, which is commonly done, as may be observed in War (anciently Warre) for the French Guerre, Ward for Garde, Wardain (now Warden) for Gardien, &c. and it is well known that French authors express our Wales by Gaules, and Cornwall (Cornwales) by Cornugaules. Whence, I think, it may be fairly inferred, that Wallish and Gallish, otherwise Gaules and Walles, have one and the same signification: and that the ancient inhabitants of this Island were originally the same people with those of ancient Gaul (now France;) which seems to be sufficiently confirmed by Cæsar in his Commentaries, where we are told that the Britons and Gauls differed not much in their manners and customs; but more expressly by Tacitus in his Life of Agricola, who tells us that the two nations differed not much in their language. This difference consisted in dialect only, I suppose; and this, probably, was no moret han what there is at this day between the dialects of North Wales and South Wales.

It is evident from the critical observations of our learned Camden, and of the great Bochart among the French, that the most ancient names of cities, towns, rivers, mountains, &c. in several parts of France, and every where in Great Britain, are naturally, and without the least straining, resolved or analyzed into Cambro-British (i. e. Welsh) etymons that are admirably expressive of the reason of the appellation: which to me is a conclusive argument that they received their name from this language. For instance: Uxellodunum (a town of Guyenne in France,) from the Celtic or Ancient British Uchel, i. e. High, and Din or dun, i. e. a city or town; and the situation of the town, which is upon an eminence, affords the strongest presumption that the given etymology is the true one. Axelodunum (now Hexam, in Northumberland) seems to have the same derivation.

Maridunum, or (as it is found in some copies of Antonine's Itinerary) Muridunum (in Welsh Myrddin) is derived from Myr and Din, q. d. Seaton. Cebennæ (high-ridged mountains in France, now Cevennes,) from the Cambro-British, Cefn (pl. cefnau.) the ridge of a mountain. Arar (a river of France, now la Saone,) from the Cambro-British, Araf, Slow; and nothing can be more expressive of its property, for its course is so slow that it can hardly be discerned; which hath given it the epithets, lentus, segnis pigerrimus, dubitans quo cursus sagat, &c. which we meet with in reading the Latin poets. Let these few suffice at present; though, if it was necessary, a great many similar examples might be produced.

I flatter myself that enough hath been said to convince all that are open

to conviction, that the ancient British language (now called Welsh) was one and the same in the main with that of ancient Gaul, now France, My business now shall be to trace it higher still; and that may be easily done, if the extensive learning and critical segacity of Bishop Walton, who quotes Boxhornius for his authority, will be allowed to have sufficient weight, and to be decisive in the dispute. Writing of languages, in his Proleg. in Bibl. Polyglot. I. S. 14. the Bishop hath these words, "Quædam tamen inter linguas nobis cognitas quasi cardinales, e quibus multæ alim pullularunt, a doctis recensentur; -- Tartarica quæ longe per Septentrionem vagatur, ad quam multae Europæorum et Asiaticorum linguæ antiquæ referendæ, si Boxhornio credendum, ut antiqua Gallica, et Britannica, cujus reliquiæ adhuc in Wallia manent." Which may be Englished thus; -- "Some however of the languages that we are acquainted with are reckoned by the learned as cardinal, out of which many others are sprung; for instance, the Tartarian, which is of vast extent in the North, to which many of the ancient languages of Europe and Asia are to be referred, if we may believe Boxhornius, as the ancient Gaulish and the British, the remains of which are still extant in Wales." But I am by no means disposed to acquiesce in any thing vague and indeterminate upon the point, and therefore shall proceed in the pursuit till I meet with something explicit and conclusive. It would be an argument of insensibility to the merit, as well as ingratitude to the memory, of that Oracle of the British language the learned Dr. Davies, not to pay a respectful attention to his sentiments on this article. And they are these, as delivered by him in his Ad Lectorem Præfatio, before his Dictionary :-- "Nos nostram inter matrices Europæ linguas, multis suffragantibus, refragante nemine, numeramus; longe antiquissimam esse dicimus, ut et Camdenus; Aboriginum hujus Insulæ linguam fuisse non dubilamus, &c." Englished as follows; "Our language we reckon among the mother-tongues of Europe, having many suffrages for this our opinion, without a single one against it; we affirm it to be by far the most ancient, as Camden also does; we make no doubt of its having been the language of the first inhabitants of this island, &c." Here we may observe, that Dr. Davies pretends not to any further discovery, than that the ancient British language belonged to the class of European mother-tongues. But Aristarchus non videt omnia. The great luminaries, that have since shined upon the antiquarian world, were not then risen. Llwyd and Pezron, those prodigies of Celtic knowledge, and boast of British antiquaries, had not then appeared on the stage of The former of these, by his Comparative Etymology which makes a part of his celebrated Archeologia Britannica, hath pointed out a method of, and laid down very easy rules for, reducing all the ancient and modern tongues of Europe to one general source and common origin. The latter, in his Antiquite de la Langue et de la Nation de Celtes, hath proved,

by his amazing skill in languages and history, that this common origin of the European tongues, was no other than the ancient Celtic; and that again derived from the Gomerian and Iaonian or Ionic, the languages of Gomer and Javan the sens of Japhet after the confusion at Babel: that the Celtic was the language of the Titans, a great and warlike nation, who spread themselves not only over all the Lower Asia, but also over the greatest part of Europe, and under the conduct of their princes, Aomon, Uranus, Saturn, Jupiter, Mars, &c. erected a vast empire, and made their language universal; of which language the Greek, Latin, Teutonic, Gaulish, British, Irish, &c. are but different dialects, somewhat disguised and altered by mutual intermixtures, by the different pronunciation of different countries, and the In the course of his researches, polishing and refinement of grammarians. this learned Armorican has given the etymologies of proper names, of rivers, towns, mountains, &c. in the countries over which the Titan empire extended itself, as also those formerly inhabited by the Gauls, the descendants of And these, most of them at least, so naturally resolve themthe Titans. selves into Celtic, i. e. British, etymons, that they seem to me to carry conviction along with them that they are derived from that alone, and from no other language.

The the authorities already produced will, probably, be thought by all those, whose opinion a writer on the subject ought to regard, amply sufficient to establish the point in hand; yet there is one still behind, qui unus instar est omnium; -- who, if all the rest were entirely lost, might alone supply their place with advantage; and this is the exquisitely learned and amazingly industrious M. Bullet, who, in his Memoirs sur la langue Celtique, "appears to have made some progress," as a professed critic expresses it, "in all the languages of the earth." This Gentleman has run in the same course with his countryman the learned Pezron, but has out-stript him in the race, and advanced so far beyond him as to make the Celtic to be a dialect of the original language communicated by the Creator to the first parents of mankind. And admitting the primitive language to have been the Hebrew, which, I fancy, very few will dispute, he is not singular in his opinion; for a very learned person of our own nation, in his Enquires concerning the first Inhabitants, Languages, &c. of Europe, published about the same time, supposes the Celtic a sister-dialect of the Hebrew. Here also coincides in effect what Dr. Davies hath advanced on this head, whose words are, " Mihi, si sensu meo abundare permittor, ab omnibus Europæis et Occidentalibus linguis, saltem quales nunc et multis retro seculis fuerunt, alienior esse videtur, quam ut ab illis derivari posse vel somnietur. Eorumque arridet sententia qui Babele natam existimant. Orientalium matricum unam esse opinor, aut certe ab Oriientalibus immediate prognatam. Pro qua licet opinione ut pro aris et focis Amicare nolim, ausim affirmare, Linguam Britannicum tum vocibus, tum phrasibus et orationis contextu, tum literarum pronunciatione, manifestam cum Orientalibus habere congruentiam et affinitatem." In English, "This language (i. e. the British) seems to me, if I am allowed to have any judgment of my own, to be of a genius so different from all the European and Western languages, at least such as they are at present and have been for many ages past, that there is not even the slenderest foundation for thinking it might be derived from them. And I am best pleased with their sentiment, who deem it to have taken its rise from Babel. It is my opinion that it is one of the Oriental mother-tongues, or at least immediately sprung from these. For which my way of thinking, tho' I would not contend as if life and fortune depended upon it, yet I may venture to affirm that the British tongue hath an evident agreement and affinity with the oriental languages in its words, phrases, composition or structure, and pronunciation of its letters."

Whosoever well examines the character of the last-quoted author, will be apt to lay no small stress on his determination, as being one who was in every respect qualified to judge on the point. The learned Nicolson, in his Historical Library, under the Article Dictionaries, expressly pronounces Dr. Davies's to be "a book which shows its excellent author to have been perfectly acquainted with all the learned languages, as well as his own mother-tongue." And the industrious Wood, in his Athenæ Oxoniensis, gives us his character in these words; —" He was esteemed well versed in the history and antiquities of his own nation, well versed in the Greek and Hebrew languages, a most exact critic, and an indefatigable person, and well acquainted with curious and rare authors." Thus qualified, he spent at least between forty and fifty years of his life in studying the language of his country, in consequence of which he rendered himself a perfect master of the ancient British, and had no inconsiderable share in translating the Holy Scriptures into it; as may be gathered from his Prafaces to his Grammar and Dictionary, collated with their different dates. And it may be justly said of him as was also said of Dryden, that if he had written nothing but his Prefaces, these alone would have been sufficient to have acquired him a great name.

Though it may be thought, by this time, to be unnecessary for the elucidation of the subject; yet I can by no means prevail with myself not to mention the ingenious Rowlands on the occasion, who, in his Comparative Table of Languages, hath paralleled 300 Hebrew words with an equal number taken from the ancient languages of Europe, corresponding therewith both in sound and signification, so as to evince an affinity and near resemblance between them. And having remarked that, of these 300 Hebrew words, more than half that number answer our present British or Welsh sounds, as near as can be expected at so remote a distance both of time and place, he very naturally concludes, "That the British tongue, having more of that

original language in it than all the rest together, may merit the esteem of being reckoned the most ancient; and least corrupted, language in this western part of the world."

Considering the marrowness of the limits I had, at my first setting out, prescribed to myself, I find I have been already rather prolix than otherwise on this head; and, therefore, would fain dismiss it, but cannot perceive how I can do this with so good a grace, and so much to my reader's satisfaction as to leave him engaged with the learned Holloway, who will not fail to entertain him with abundance of British words naturally derived from Hebrew originals; nor doth he ever seem to be so well pleased, as when he is thus employed. His general method is, first, to derive a British root or primitive from a Hebrew one; then, to trace it in its derivatives; and lastly, to consider its metaphorical acceptations. And being struck with the naturalness and facility of the derivation, and the affinity of both sound and sense, he sometimes concludes thus; "This, by the way, shews the great antiquity of the British language, with its wonderful simplicity, and close dependence on the Hebrew, of which, examples in vast numbers might be given." Sometimes thus;--" Perhaps no derived language can show the like agreement with the original." And sometimes, in the strains of admiration, thus; "With what pleasure and advantage might persons learned in this language (i. c. the Ancient British) read the Hebrew!"

Let this suffice to shew the Antiquity of the Cambro-British language: its copiousness comes next in course to be considered.

Nothing can be more derogatory to a language than a paucity of words, and a scantiness of expressions. The most vigorous parts must soon flag under such restraints, and the liveliest genius grow, tame and languid under such perpetual checks. A prose-writer in such a language will labour under an inconveniency analogous to that of a man walking in fetters; and the poet in it may not unaptly be compared to a wretch attempting to run loaded with double-irons. The ancient English, or more properly the Anglo-Saxon language, seems to have been originally very scanty; and this we may infer from the necessity it was under of borrowing from others, wherewithal to supply its own deficiencies. The English language indeed, as it appears in its modern garb, discovers nothing of its original meanness and pristine nakedness; so far from this, that it exhibits at present a very specious figure; but it hath learned the art to make itself thus fine with the spoils of other languages, i. c. of the Greek, Latin, Italian, French, &c. and if each of these was to resume its own, proud Master English would be much in the same predicament with the jack-daw in the fable, which when the birds observed strutting about in feathers not his own, they all at once fall a pluming of him, and when each of them had assumed what originally belonged to himself, the cox-comb bird was reduced to his former shabbiness, and rendered a truly ridiculous object.

A language copious in its words, and abounding in variety of expression, is the delight of the Orator, and is essential to the very existence of the Bard. It enables the former agreeably to vary his diction, and to round his periods to a charming degree of eweetness: the latter it enables ever to avoid a disgusting sameness of versification, and to produce a-melodious variety in his lines.

What hath been said of the English, may, with very few exceptions, be affirmed of most of the modern languages of Europe; which however they may differ in other respects, agree in this, namely, that they borrow their technical terms, and names of the sciences; from the Greek: and this is a proof of their native poverty and domestic scantiness.

But the Cambro-British or Welsh language is possessed of native ornaments, and unborrowed treasures. It rivals the celebrated Greek itself in its aptitude to form the most beautiful derivatives; as well as in the elegance, facility, and expressiveness of an infinite variety of compounds: but if we compare these languages in regard to primitives, especially those that are synonymous, the Greek with all its boasted copiousness must here give way. The learned Humphrey Pritchard, touching upon this point in his colchected Preface to Dr. J. D. Rhys's Grammar, bath these words; Lingua (sine dubio) derivationibus, compositionibus, vocam aptitudine, et sermonis venustate adeo dives ut ad cujuslibet artis cognitionem exprimendam, facilius aut faslicius nihil exoptari poterit." The substance whereof is as follows;— "A language this (beyond-all dispute) so abounding in derivatives, compounds, propriety of words, and beauty of expression, that for the purpose of communicating the knowledge of any art or science, nothing that was attended with greater facility, or more happily calculated, could possibly be wished for." And the great Dr. Davies, whose sentiments on the subject will not fail to engage the attention of the learned, in his Preface to his Dictionary, writes; -- "Composita in nostra lingua tam sunt numero infinita ut ne Græca quidem in hac parte concedat copiæ tantapere jactatæ, que tamen in com positionibus ut plurimum sita est." In English, "The compounds in our language are so infinitely numerous, that in this respect it by no means falls short not even of the so much boasted copiousness of the Greek, which however lies mostly in its compounds."

But what bath been here asserted, I shall proceed to explain and confirm by a few examples. Horizon is an astronomical term of Greek extraction, and made use of to express the circular line that limits the view and bounds the sight. This term Cicero would fain Latinize; and the Latin, we must own, was by no means an inexpressive language, especially in the mouth of a Cicero; but Finiens, or Orbis finiens, is (in my humble opinion) flat and languid, when compared

with the native energy of the original term Horizon. Here Seneca too weald try his skill, but with no better, if with equal, success; for Finitor will be hardly thought to mend the metter. The French, probably out of a consciousness of the innate debility of their language, never attempted a translation of this term, but have always used it, without either mask or disguise, in its primitive form. The English also have borrowed and retained the term without any transformation, whether it was from a fondness of copying after their good neighbours the French, or from what other motive. I will not take upon me to determine. But whether Terfyngyich, the Cambro-British term answering to the Greek, be not equally expressive and conveys an idea equally distinct and nervous with Horizon, I shall not hesitate to submit to the determination of any one, that is but tolerably acquainted with both languages. From a kind of presaging confidence of a decision in my favour, I was going to cry out,—Ex uno discite omnes; but upon recollection, I have reason to know that mankind in general are more tenacious of their opinions, upon how slight soever a foundation they may at first have been entertained, than to suffer themselves to be beat out of them by a single argument, tho' ever so cogent and convincing. I therefore proceed in the business of exemplification. Grammar is a term borrowed from the Greek, .and used with little variation by the Latin, French, English, &c. but the Welsh are under no necessity of borrowing from others while they have so significant a term of their own as Llythyreg. I might with equal propriety instance in the terms Arithmetic, Astronomy, Logic, Music, &c. but whoever will but take pains to consult the annexed English-Welsh Dictionary, will be fully convinced of the truth of what is here advanced.

In respect of synonymous primitives the Cambro-British lauguage is rivalled by few, but excelled by none, except it be the Arabic, which may be said to be bewilderingly copious; for, if what we are told by some Authors be true, the Arabians have no fewer than a thousand words whereby to express a Sword, and three hundred that signify a Lion.

But the Cambro-British compounds and decompounds have always been and ever will be, the admiration of all that are acquainted with the language: for here we may observe two, three, four, five, and sometimes six words coalesce so naturally, through the change of initials, as to produce harmoniousness of sound, as well as expressiveness of sense. For instance, Teulu (rectius ty-lu) signifying a Family; compounded of Ty a house, and Llu a number of persons united together. Tylwyth, a Family; compounded of Ty a house, and Llwyth a tribe. Cymmaethlu, a family; compounded of Cyd together, maeth nourishment, and llu a band or company; quasi dicas, a company of persons boarding together. Llathr-gein-dlos-fwyn is an epithet for a fine woman, and it is compounded of Llathr bright, cain (fem. gain) fair, tlws (fem. dlos) beautiful, i. e. in person, and mwyn (fem. fwyn)

gentle, i. e. in manners. Gor-lathr-gein-deg-fwyn is an epithet much of the same signification with the former, but heightened by the prepositive particle Gor i. e. very or exceeding. Cym-mhleth-eur-grwydr-gein derch, i. e.

## Of many a braid of golden hue The weaving beauteous wreath,—

The these last decompounds—these sesquipedalia verba—have nothing rugged in their sound or structure, yet by these I would represent, not what usually is, but only what occasionally may be, done in this copious language.

I now proceed to consider its Grammatical Perfection, and in order to this I shall lay before the reader the common or generally prevailing Welsh Alphabet, with the similar sound of each Character in a collateral column, vis. Characters. Pronounced.

A, as a English in man; but when circumflexed, as in Mane.

B, as b English.

C, as k English, or c hard in can, come, &c. never soft, as in cease, city, &c.

Ch, as x Greek properly pronounced, the English having no sound similar to it.

D, as d English.

Dd, as th English, in then, they, &c. i. e. soft; not hard, as in think, third, &c.

E, as e English, in ten, fen, &c. but when circumflexed, as ea, in bear, rear, &c.

F, as v, in very, vile, &c. or as f English in of (ov.)

Ff, as f English, in fan, fight, &c. or as ff English, in of.

G, as g English, in gain, get, gone, &c. i. e. hard, never soft, as in gin, gender, &c.

H, as & English, in hand, house, &c.

I, as i English, in hid, bid, rid, &c. but when circumflexed, as ee, in deed, feed, &c.

L, as l English.

Ll, is *l* strongly aspirated, and can be represented in English only by *lh*, or *llh*.

M, as m English.

N, as a English.

Ng, as ng in the English words bring, king, long, song, &c.

O, as o English in gone; but when circumflexed, as o, in bone.

P, as p English.

Ph, as ph English, in physic, philosophy, &c.

R, as r English.

Rh, as rk English, in rhetoric, rheum, &c.

8, as s English, in sense, since, &c.

T, as & English, in ton, tun, temper, &c.

Th, as th English, in thanks, thick, death, &c. but never as in then, they, &c.

U, as i English, in bliss, miss, this; but if circumflexed, as ee in green, seen, &c. or rather something like w French, in un or unc.

W, as o in the English particle to, or oo in good; but when circumflexed, as oo in Boon, Noon, &c.

Y, in any syllable of a word, except the last, as a English in burn, churn, hunt, &c. or as i in bird, first, &c. but in the last syllable of a word (whether the word consist of one or more syllables,) as i English in birth, girth, mirth, sin, &c. or as i Latin in vis, virtus, &c. except that in these Monosyllables, Y, ydd, ym, yn, yr, ys, fy, dy, myn, it retains its former sound, i. e. of a English in burn, churn, &c.—N. B. The both sounds of y are represented nearly in the English word sundry; but more perfectly in the Latin word, nunquis; and entirely in the Welsh words, hynny, llythyr, myfyr, pybyr, ystyr, &c. Let it also be noted, that the circumflexed y hath one and the same sound with circumflexed a; yet, for etymological reasons, the one ought never to be used for the other.

I have been thus express and minute on the sounds of the letters, as well knowing that whosoever is but well-informed in this article, must of course know to read the Cambro-British Language, for in this, as well as in those celebrated Languages of Greece and Rome, every Character set down in a word is fully and distinctly pronounced in reading, so as to produce one uniform and unvaried sound. Here no written character is ever whimsically sunk in pronunciation, or forced to express a multiplicity of sounds, as in the English, the French, and other modern languages. Let any one but learn the Alphabet and the power of its letters, and he shall need no further aid or assistance in the article of reading; for then the work is done, and the labour is over.

It must, however, be considered that it is impossible to read any language with propriety without an acquaintance with its Accent; but in the Welsh this is easily attainable; for all its words (of what quality soever,) consisting of more than one syllable, are accented on the Penultima, excepting Verbs ending in as and oi, together with contracted Verbals derived from the former, which have their Ultima circumflexed. So that with regard to accentuation, this our Language hath confessedly the advantage, not only over the English, but even over those learned Languages the Greek and Latin: for the rules of accenting in the former of these, i. e. the Greek, as being made to clash with, and, as it were, to fly in the face of the natural quantity of syllables, are unnatural, perplex, and

intricates; and in the latter, one ought to be well-skilled in its Prosody and laws of Versification before he pretends to read with any degree of accuracy. But the native simplicity of our Language, in this point, never appears to equal advantage as when contrasted with the English, whose mode of Accent is at this day capriciously puzzling, as having of late been continually shifting with the veering taste of the times, which is as unsteady as a weathercock: nor hath the celebrated Johnson\* with all his literary abilities—with Learning and Reason at his side, and Fame in his train been able to subdue the everchanging Proteus, reduce him to, and fix him in, the natural shape. A young Fellow, whom Fortune hath stationed as a Reader in some place of eminence, and on whom Nature (to atone for his mental deficiencies) hath bestowed a melodious voice, will out of meer vanity, an estentatious desires of distinguishing himself, form the project of altering the prevailing mode of Accentuation and of introducing a new one; and this be will have sufficient authority to effect by means of the above-mentioned advantage. This principle (i. e. a desire of being taken notice of) which is implanted in every human breast, for want of being properly directed and kept within due bounds, burries men on to make themselves oftentimes midiculous, and sometimes pernicious to Society. Actuated by this, the Frenchman formerly came tripping a minuet down the middle isks or nave of St. Peter's at Rome, who being asked by his companion that stood amazed at his behaviour, what he meant by it, answered very jovially, "On doit faire quelque choes pour se And it was this same principle, that influenced Erostratus in ancient times to set the temple of Diana at Ephesus on fire. But from what cause or principal soever it may have sprung, it will evidently appear to the candid critic and competent judge in these matters, that the state of the English accent at present is inconsistent with all Analogy, is in some cases dubious and uncertain; and in others, forced, affected, and unnatural. If what is here asserted be void of foundation, and the charge groundless, let any one but take the pains to refute it, his argument shall be fairly weighed in the scale of Reason, and I solemnly promise not to preclude, but always to preserve my mind open to, conviction. I wish, and would greatly rejoice, to see every stain of affection wiped off—every brand of imperfection erased from a language so elegant and expressive, as the English is in its present (in other respects) improved state. And why this may not be accomplished, reason there is none. It is a task easy in itself, since nothing more is requisite for the purpose than to lay down a few comprehensive well-digested rules, uniformly deduced from analogical prineiples, and to have these fixed as a standard by proper authority. Why

<sup>\*</sup> Dr. Samuel Johnson, Author of the English Dictionary, the Rambler, &c. &c.

should any foundation for so diagraceful a charge be suffered any longer to remain?

- "Pudet hac opprobris nobis ...
  "Et dici potuisse, et non potuisse refelli."
- These scandals we with indignation hear, And yet must own th' accus'd we cannot clear.

What hath been here said, with regard to the English Language, may, if the Reader pleaseth, be considered as a kind of digression, and not intimately connected with the subject in hand.

That which hath most of the appearance of difficulty in the Welsh Language (especially to those that are strangers to, or but superficially acquainted with, it) is the Variation of these letters, viz. b, c, d, g, ll, m, p, rh, t, when they are initial, i. e. begin a word; and which, from this their changing quality, or disposition to vary, are styled mutable or convertible Consonants. But this difficulty is only apparent, and not real, arising from a distant and superficial survey of the matter, and, consequently, will vanish away upon a closer inspection: for, let any one but examine the point with proper attention, and he will find these Variation of Initials conducted by express and definitive rules; and founded upon a judicious and laudable principle, namely, that of smoothing the pronunciation of the language, and . thereby, rendering the reading of it easier, more melodious and agreeable. Nor yet is this altogether appropriate to the Welsh; for we find in the Hebrew a parallel to this, as far as it goes, but not so extensible, in those six letters of the Alphabet called by the Grammarians, Begadkephath, which have an attenuated or an aspirated sound, as they are, or are not, marked with the point, Dagesh. In the Greek too we find something analogousto this; namely, in those Consonants called Mutes, which change their sounds from the hard to the soft, and thence to the aspirate, and yet, in every Variation, retain an evident alliance with each other; and instances of this I might give in the Characteristics of Greek verbs, but that I deem it unnecessary, since the point hath been so lately illustrated by the learned and ingenious Dr. Llewelyn, with a happiness and facility peculiar to himself.

It may not be improper here to remark, that, in the change of Initials in the Welsh Language, the strictest regularity is always observed; for this change is never admitted, but between Letters of the same organ; so that dentals are never changed into labials, nor labials into dentals, &c.

In those celebrated languages of appiquity, the Greek and Latin, the terminations of words were generally affected by preceding parts of speech; so that the agent, in that case, acted at some distance: but in the Cambro-British language, a foregoing word acts for the most part, with an immediate influence upon the initial letter of the subsequent; which, in my opinion, is more natural.

Whosoever would know more of this matter, let him consult Dr. Davies's Grammar, or Gambold's, or Richards's prefixed to his Dictionary; and let him bestow but half the attention upon any of these, that is requisite in order to attain a competent skill in either the Latin or Greek Grammar; then, if he can, let him with-hold his approbation from, and refuse his assent to, what hath been here advanced with regard to the perfection of the Grammar of the Welsh Tongue. But if any one should be so prejudiced against the Language, as to be obstinately deaf to whatever argument may be produced in its favour; and should take up this Pamphlet with a determined resolution not to be convinced by any reason it may contain; let such know that it was never intended for his perusal.

I come now to make some observations on the Poetry of the Ancient Britons, whose "language seems to be particularly adapted for poetry," says an ingenious Author, whom few will accuse of partiality to it; for, when he hath with no little pains, and some taste, erected a kind of Pillar in honour of it, he applieth his pick-ax with so much dexterity to the foundation, that with a single stroke he lays it level with the ground. On the side of praise he mentions so many articles as its indisputable property, that, being added together, form a very musiderable aggregate in its favour; but he never fails to set down such particulars on the other side, as will, upon their being summed up and the necessary deduction made, exhibit a clear. balance against it. "Its wariety (i. e. of the Welsh language,) copiousnesss, and even harmony, is to be equalled by few, perhaps excelled by none; says this elegant Writer, in a fit of good humour. And again;—'This language, -however extraordinary it may seem to some, on account of the multiplicity of gutturals and consonants with which it abounds,—has the softness and harmony of the Italian, with the majesty and expression of the Greek." Handsomely (and, if I know any thing of the matter, justly) said! But, is there not a palpable inconsistency between these encomiums, and what follows at no great distance.—" The poets (says he,) or such as pretend to be such, arrogate to themselves a most unwarrantable poetical license of coining words, for the sake of sound; and this they will seldom scruple to do, whenever they want a word for rhyme. Hence the greatest part of their poetry, is nothing more than melodious nonsense, a perfect jargon of harmonious sounds. And when translated, scarce reducible to common sense. This unbounded poetical license, though generally, yet, is not universally adopted. For there are not wanting many poets, who seldom claim this unwarrantable prerogative of coining words ad libitum."

Any one (tho' ever so great a stranger to the language and its poetry,) that reads the above-cited passages with proper attention, must perceive that the former ones clash with the latter; if not in direct terms, yet certainly by necessary consequence: or at least, that it is very improbable, and next

to impossible, that the latter assertion should be true, if the former ones are What, in the name of reason and common sense, should induce the posts, to set about coining words, which they knew could be of no value, as having no meaning; when a language, copions, harmonious, and expressive as the Weish is represented to be, displayed its stores, and submitted to their choice a boundless variety of words of known significations, and established authority? If, in reading the works of our venerable Bards, we happen to meet with a few words, whose meaning cannot at this day, perhaps, be clearly ascertained; are we, from this accidental ignorance of our's, immediately to conclude that they were coined, for the sake of rhyme, by those Bards, in whose works we happen to find them? We might as often as we, in reading the Greek and Latin Classics, stumble on a word whose meaning hath been obscured by the rust of Antiquity, with equal reason infer that the writer, who useth it, was the coiner thereof; and that he minted it for the sole nurpose of making out the verse, without regarding in the least whether it had any meaning at all or no. The inference, unless I am greatly mistaken, would be equally wise, natural, and judicious in both cares.

I am really at a loss to account for the motive that could induce a Writer of distinguished talents so disingeniously to satirize the Welsh nation; for I cannot possibly consider the Letter from Snowdon in any other light, than that of a masked Setire.

Let the Author of these Letters enjoy, if he can, the secret pleasure that ariseth in the honest Author's breast from the consciousness of his having done justice to his subject, in treating it with faithfulness and sincerity.

The Bards have been always considered by Cambro-Britons, and deservedly too, as the guardians of their language and conservators of its purity. In this light they were viewed by the celebrated Dr. Davies, as is evident from his having chosen, in the compilation of he is to rely chiefly on their authority; and this he might very safely on their authority; and this he might very safely on the well knew (as appears from the Preface to his Gramms of Laws expressly forbad the Bards to introduce any new word impositions. But enough of this; and indeed I am glad to have finished the task of refutation, which I entered upon not without some degree of reluctance.

The Welsh, in the structure of its Poetry, is widely different from all other languages both ancient and modern: for herein we may observe such a peculiar ingenuity in the selection and arrangement of words, as to produce a rhythmical concatenation of sounds in every verse; which concatenation is so characteristic of, and essential to Welsh poetry, that, exclusive of this, it could have no existence. With regard to the texture and versification of their poems, no Bards, in any language, over surpassed the Welsh; or even equalled them, if we may depend in this case on the judgement of Edmund

Pryse, Archdeacon of Merioneth, who was as well acquainted as any man living with the rules and genius of Welsh poetry; and whose talents, as a Latin poet, appear by no means contemptible from the specimen we have of them in a Copy of verses, written by him when he was eighty years of age, and which may be seen prefixed to Dr. Davies's Grammar. On the poetry of his native country, his words are;

"Ni phrofais, dan ffurfafen, Gwe mor gaeth ar Gymraeg wen."

Which may be thus Englished,

Of all the tissues ever wrought,
On the Parnassian hill,
Fair Cambria's web, in art and thought,
Displays the greatest skill.

The laws of poetical composition in this language are so strict and rigorous, that they must greatly cramp the genius of the bard, but that there is, in the language itself, a particular aptitude for that kind of alliteration and jingle, which constitutes the beauty of its poetry.

The English reader may perhaps be able to form some faint idea, some imperfect notion of the singularity of the Welsh language in the formation or construction of its poetical numbers, from the following stanza on Envy; viz.

"A Fiend in Phæbus' fane he found
That yonder grew, yet under ground,
Sprung from the spawn of spite;
The Elf his spleen durst not display,
Nor act the devil in the day,
But at the noon of night."

I would not here be understood as if I intimated that there was the least similarity in the form of the stanza but only in the structure of the verse. For though, with regard to the former, the Cambro-British Muse hath, at the instance of her votaries, condescended to put on various other garbs, wherein she hath appeared not only not ungraceful, but even with some degree of dignity and ease; yet the robes she hath ever gloried in are the Twenty-four celebrated ancient British Metres, unknown to every Muse besides, and wherein she hath always shone with "unrivalled lustre in native Majesty confest." Some, from a very slight acquaintance with the Welsh language, have magisterially pronounced it to be harsh, rugged, and incapable of expressing soft and melodious sounds: but to be convinced of the falseness of the assertion, one need only read the following couplet, which was written on a harp, viz.

" Mae mil o leisiau meluson, " Mal mel o hyd ym mola hou."

I despair of being able to convey the mellifluence of these lines in any other language, but I believe, the sense will be found to be pretty nearly expressed in this distich, viz.

Within the concave of its womb is found, The magic scale of soul-enchanting sound.

The Greek and Latin poets, especially Homer and Virgil, have been greatly admired for their singular skill in adapting the sound to, and making it expressive of, the nature of the thing they described; thus dexterously varying their numbers with the varying theme, and ever accommodating their words to the subject with the nicest taste and discernment. Various instances of this have been produced; some of which, it must be acknowledged, carry their evidence along with them; while others seem to depend, for this particular beauty attributed to them, entirely on the imagination of the critic. But it may be justly said, that no Poets ever displayed greater masterliness, in this respect, than the Welsh; nor was there ever a language, more happily calculated than theirs for the exhibition of this beauty, in all its variety and extent. There is nothing in Nature more awfully grand and majestic than the sound of thunder; and yet I believe, I may safely venture to appeal to the ears of the reader, for the truth of the remark I am going to make; namely, That the sound is, with an amazing happiness, made an echo to, and, as it were, a picture of the sense in the following distich;

" Tân a dŵr yn ymwriaw, Yw'r daranau dreigiau draw,"

Englished,

The rearing thunder, dreadful in its ire, Is water warring with aerial fire.

In order to justify my remark, I might here proceed to analyze the quotation; point out the frequent repetition of the \*canine letter, the most expressive of a hoarse and rumbling sound of any in the Language, take notice of the concourse and assemblage of the most broad-sounding vowels, the most broad-sounding diphthongs, &c.—but I have lodged my appeal with the reader, and, as I have no reason to distrust either his judgement or his candour, have no desire to withdraw it.

When a Language deals largely in circumlocutions, and makes use of a multiplicity of words for the conveyance of its sentiments, it is a sure sign of its native debility and scantiness of expression: for we may observe in this, as well as in some other cases, that they, who can the least afford it, are the most lavish and profuse. But the glory of a Language is an expressive brevity, and a perspicuous conciseness; and of this, a thousand happy instances might be produced out of the Works of the Cambro-British Bards. Judge of the rest by the following specimen; viz.

" Gwŷr a wnâ gŵr yn ŵrol, Gŵr a wnâ gwŷr yn ei ol."

Englished,

Brave men with bravery will their leaders fire, Brave chiefs their men with bravery will inspire. If these few cursory and superficial remarks, and such as are by no means worthy of the subject, should yet have the good fortune so far to excite the curiosity of any person of taste and judgement, as to engage him in the study of the Language and its Poetry, I dare undertake that he shall have no reason in the sequel to think his time misemployed, or regret the pains he shall have bestowed upon the pursuit: for here he will find the most melodious numbers, the most poetical diction, the most nervous expression, and the most elevated sentiments, to be met with in any language, whether ancient or modern; and if any of, or all, these be the student's object, he cannot possibly be here disappointed.

It is pretended by those that are no friends to the Welsh Language, that there is nothing extant in it that is worthy of the perusal and attention of the gentleman and the man of letters. The answer probably will, as it justly may be, that there is at this day in print an excellent Body of Laws originally written in the language, and published under the sanction of the highest authority in those days; viz. The Laws of Howel Uda. "A perfect Chaos," replies the Objector, who, you may safely conclude, never spent an hour in the examination of them; perhaps, never saw them in his life. It would be quite idle to offer any thing by way of argument, in favour of them, to a person of this temper: I shall therefore detain him no longer than while I observe that the learned Dr. Wotton was of a different way of thinking; who, having acquired a critical skill in the language, thought it worth his while to bestow an excellent Latin translation with motes upon these laws, though, to the great regret of the Common-wealth of learning, he did not live to publish these fruits of his labour, and study; but the loss was happily supplied, in this particular, by the Rev. and learned Mr. William Clarke, who has favoured the public with an elegant edition of these, introducted by an excellent Preface of his own.

We have the Bible that system of Divine truth, in this language, being translated into it by persons eminently learned and pious, who, as appears from the translation, were unbiassed by preconceived notions and opinions, uninfluenced by bigotry, and untinctured with the frenzy of wild enthusiasm; who upon this occasion, as well as upon all others, learned from the Holy Scriptures to "speak the words of soberness and truth." Here, as far as I am capable of judging, are no perversions of texts for the unworthy purposes of supporting absurd and impious tenets, the shocking inventions of gloomy fatalists, and the wayward whimsies of disordered brains. This translation is remarkable for the purity of the language, and a native simplicity of style which so eminently characterises the original: for it hath been observed by the skilful in both languages, that there is a surprising affinity between the Hebrew and the Ancient British in their idioms, peculiarities of style, and mode or turn of expression.

There is an original Composition in the Welsh Language entitled; Y Bardd Cicsg, i. c. The Visitinary Bard-consisting of three Visions, viz. The Vision of the World; the Vision of Death; and the Vision of Hell. This is a species of Stiffe, partly literal, but mostly allegorical, wherein Vice, Polly, and Vahity are lashed th a very historly manner, being drawn in the most hideous (i. e. their most proper) forms, and represented in all the sad variety of Wob. In this performance are the boldest and most poetical personifications, the liveliest and most animated descriptions, and the noblest flights of imagination any where to be met with in either prose or verse. Don Quevedo's Visions deserve by no means to be named with these, as will be perceived and acknowledged by any one that will but compare them together, though ever so superficially. I have heard of a person that was so much in love with Don Quixote, that he took the pains to learn the Spanish language, in order to have the pleasure to read his favourite author in the original. I should not at all wonder if many were to learn the Welsh language, that they might be able to read the Bardd Cwig, could they but once form an idea of its excellence.

I'might here proceed to specify some Historians, of credit; some Bards of renown, Phoebus's undoubted sons; some Relics of antiquity, that have hitherto escaped the devouring jaws of time, which are still extant in the Welsh language, some in print and some in manuscript: but I am persuaded that what hith been already produced is abundantly sufficient to awaken the attention of the curious and candid; and as to those of a different disposition, I might almost as well attempt to raise the dead, as to rouse them out of their lethargy, and engage them to lend an attentive car to any thing that happens to thewart their prejudices.

There are some even among the sons of Cambria (but they are degenerate sons,) that have conceived such an unaccountable dislike and aversion to their mother-toligue, their native language,—that they have not scrupled to wish it exterminated, and every memorial of it erased from off the face of the earth! But is it possible that these should be descended from the Ancient Britons? It cannot be. No;-It cannot be. These certainly must be the offspring of aliens (Normans, Flemings, &c.) that have by intrusion formerly got footing in the country. To be a passive and unconcerned spectator of (though one should not proceed so far as to be aiding and active in) the extirpation of the language of one's ancestors, betrays a tameness of spirit, and a servility of disposition, by no means becoming a gentleman, or one that hath any ancestry to boast of. Whether a few mercenary tradesmen, a few tricking drovers, &c. may, or may not be something incommoded by the existence of more languages than one at a time in a nation, is an enquiry of too little importance to employ the serious thoughts of the cultivators of language and literature; for, the particular advantage of such individuals is an

object not worth the care of the liberal and enlarged mind, when that comes in competition with more interesting considerations, namely, the concerns, both temporal and spiritual, of a numerous people.

It may be observed that they, who, being Welshmen by birth, have lately commenced Englishmen, and either have, or pretend to have, forgot their mother-tongue, are generally the most rancorous against it, in order, I suppose, to manifest their affection for that which they have espoused. And herein they imitate turn-coats in religion, especially Protestants that revolt to the Roman Catholics, who, in order to shew their seal for the Church they have adopted, generally persecute that which they have deserted.

It is highly absurd, and little short of madness, for any one to pretend to treat of the Antiquities of Britain without an acquaintance with, or a competent skill in the Ancient British Language; for, without this, no extent of learning,—no industry of research,—no critical sagacity, will ever be able to preserve the British Antiquary from committing, in every page, the most ridiculous blunders; whereof a proper judge may at any time find instances enough to provoke him to the exercise of either his risible, or indignant faculties, as he happens to be in the humour. I would defy even a Diogenes with all his gravity and all his surliness, provided he were but sufficiently acquainted with the Cambro-British Tongue, to with-hold the smile at the perusal of etymologies of the names of cities, towns, castles, &c. in Britain, ineptly given by English Antiquaries through want of skill in the original language of the country, though, in other respects, learned and ingenuous men.

What I have here advanced are my real and undissembled sentiments, offered as a sacrifice to truth, and not proceeding from a censorious principle, pique, spleen, or any other unworthy motive or influence whatsoever.

I am now preparing to take my leave of my subject, and, for the present, to bid the reader adieu; having discharged (imperfectly, I confess, yet to the best of my ability) what I conceived to be a part of my duty to my mother-tongue, and paid a small tribute to the pre-eminence of my native language. I shall not hesitate to profess to the world, that I prefer this to any of the languages ancient or modern, that I have any acquaintance with; that it is a language which I greatly admire, and "Cujus amer miki crescit in horas," for which my affection increases every hour! Nor would I have the reader by any means imagine, that this preference springs from blind prepossession, or undiscerning partiality; no, but from the best and most impartial judgement that I have been able to form of the comparative merit of this language, when I had spent many of the best years of my life in the investigation and study of it.
